VOTEX™ Electronic Voting System:  
a user friendly voting experience

## The system's unique features

The VOTEX™ system guarantees a superior level of confidentiality, reliability and security. It will provide your organisation with a tool that will help manage different aspects of the electoral process while offering a savings in terms of time and energy.

## Easy to use

We believe that exercising your democratic right to vote should be as easy and efficient as possible while ensuring the elector's confidentiality and accuracy. Two simple steps allow an elector to vote.

### Step 1

#### The elector selects their desired candidates

The activated voting terminal allows the elector to press a button indicating their choice of candidates. The elector can modify his selection at any time.

### Step 2

#### The elector records their vote with the touch of a button

Once the elector is satisfied with their choice of candidates, they simply press a flashing green button labelled "CAST MY VOTE" that is found at the base of the terminal.

## Nerver lose a vote

Strategically placed memory in both the voting terminal and the control unit ensures that every vote is accounted for.

The real-time printing of each vote as it is cast provides a reliable paper trail.

## User-friendly

The electors will see the candidates' pictures, names and political parties which makes their selections very easy to identify.

## Accessibility and participation

All electors can vote without another person's assistance, namely, the elderly, limited mobility, visually impaired, illiterate and allophone individuals.

## Speed and efficiency

Print the election results for your polling stations within seconds.

## Integrity and accuracy

One vote per elector, no over-vote, no ballot rejection, no miscounted votes. (Optional: Electors can choose to spoil their ballot)

## Cost savings

A reduction in the number of voting locations, personnel required, and duplicated tasks.

## The System's Hardware Components

A VOTEX™ Electronic Voting System includes:

- One Master control unit
- Up to six voting terminals (a choice of 16 or 48 button unit)
- A sealed and secured printer that registers each vote in real-time as they occur
- A universal power supply
- A display terminal for elector information purposes
- A selection of consumables

Reliable

## ***Electoral Technologies***

### **VOTEX™ Election Management Software Package:**

VOTEX™ offers you a complete software solution that will help you manage each step of your electoral process. The package contains several components such as Electoral List Management, Polling Management, Results Management, an election information web portal for voters, and a secure web extranet that allows the election presidents and their teams to track and follow-up on the logistical aspects of the election process.

#### **Preparation your electoral list:**

- Import your most recent electoral list and any associated data;
- Use the internal Geographic Information System (GIS) to manage the territorial divisions and polling subdivisions;
- Eliminate double entry errors and multiple inscriptions;
- Use the software to produce inscription status notices.

#### **Revise your electoral list:**

- Search for any elector using our advanced search tools;
- Reduce the time required to process various forms, and automate time consuming tasks such as the handling of notices, reports and certificates;
- Track any changes made to your electoral list with a comprehensive audit trail and easily produce a list of those changes;
- Produce reminder cards for each elector with integrated barcode technology.

#### **Use your electoral list:**

- Your electoral list can be used at a mobile polling station, advance polling stations and at polling stations on Election Day;
- Quickly and efficiently identify electors using barcode identification, or advanced search tools;
- Register electors that have voted;
- The system automatically generates electronic and paper lists of electors that have voted at specified intervals;
- Access the automated poll logbook system.

#### **Validate operations after Election Day:**

- Access a variety of reports derived from the election statistics and results;
- One-click secure and accurate transfer and compilation of results;
- Export changes made to the electoral list, or the complete list for future use.

#### **Technical features:**

- All equipment is provided and preconfigured - no installation on your part is required;
- Uses an intuitive and stable MS Windows XP™ interface;
- Database system uses MS SQL Server™;
- Operates in both web-based online or local offline modes depending on your needs.

#### **VOTEX™ Election Management Software Package:**

*a valuable addition to your organisation's electoral management tools.*
